Is There Evidence of a Global Depopulation Agenda by Elites?

Sixbert SANGWA • November 07, 2024

The theory of a global depopulation agenda orchestrated by powerful elites has lingered in public discourse for decades. Though dismissed by many as conspiracy, historical records, public statements from influential figures, and recent actions in global health and environmentalism suggest a more layered reality. From the eugenics movement to recent pandemic responses, the concept of reducing or controlling population growth has often emerged, creating concerns about whether some programs operate under seemingly benevolent guises, with hidden intentions.

For Christians, who are cautioned against deception and urged to test everything against Scripture (1 Thessalonians 5:21), understanding such trends through a biblical lens is crucial. Scriptures provide clear warnings about end-time deceptions, where worldly authorities exert unprecedented control over people, often under the guise of peace, safety, or societal improvement (Matthew 24:24). In exploring this topic, we delve into historical accounts, modern health programs, and testimonies from experts at the International Tribunal for Natural Justice (ITNJ) to evaluate the evidence for a global depopulation agenda.

Historical Roots of Population Control Ideologies

The ideology of controlling population growth is not new. In the early 20th century, the eugenics movement gained traction among influential circles in the U.S. and Europe, advocating for selective breeding to "improve" human genetics. Margaret Sanger, the founder of Planned Parenthood, was a key figure in this movement and once stated, *"More children from the fit, less from the unfit—that is the chief aim of birth control"* (Sanger, 1921). Though framed as a public health issue, eugenics was often used to marginalize and control populations considered undesirable, laying a foundation for future population control agendas.
Another landmark in the history of population control was the 1974 *National Security Study Memorandum 200* (NSSM 200) by U.S. Secretary of State Henry Kissinger. This document argued that population growth in certain developing nations threatened U.S. interests and proposed implementing policies to curb population growth through foreign aid programs promoting birth control. While the policy was justified as a means to protect natural resources, critics have argued it was an attempt to reduce populations in poorer nations under the guise of economic and environmental sustainability (Kissinger, 1974). This approach prioritized limiting population growth rather than addressing root causes like poverty, lack of education, and inadequate infrastructure.

Modern Health Programs and Vaccination Initiatives

In recent years, concerns over population control have resurfaced in the context of global health programs, particularly vaccination initiatives. Dr. Judy Mikovits, a prominent virologist, presented compelling testimony at the International Tribunal for Natural Justice (ITNJ), claiming that certain vaccines and health policies may be contributing to chronic illnesses, compromised immune systems, and even an increased risk of death. Dr. Mikovits testified that her research linked vaccines containing contaminated animal cells to a range of neuroimmune and cancer-related diseases, claiming that powerful institutions, including the National Institute of Allergy and Infectious Diseases (NIAID), actively suppressed her findings (ITNJ, 2020).

She stated, *"Regarding public health administration, it appears to have evolved into a mechanism for global population control and reduction"* (ITNJ, 2020). Mikovits highlighted how vaccinations, particularly those using animal tissues and cell lines, have introduced foreign viruses into the human body, potentially leading to chronic diseases and reducing human lifespans. Her research on mouse viruses contaminating the human blood supply allegedly led to a campaign to silence her, with her data confiscated and her research funding removed. According to Mikovits, this suppression points toward a larger agenda to limit population under the pretext of advancing health. Supporting this view, Dr. Thomas's (2022) research found significantly lower rates of chronic diseases and developmental disorders among unvaccinated children, raising questions about the long-term effects of current vaccination schedules.

The Pandemic Response and Population Control Concerns

The response to the COVID-19 pandemic has raised additional questions about a global depopulation agenda, especially regarding the push for universal vaccination. During the ITNJ hearings, Dr. Rashid Buttar expressed skepticism over the necessity and safety of COVID-19 vaccines, asserting that the pandemic was being used to justify extensive vaccination campaigns with hidden motives. He stated, *“The idea that viruses are the sole cause of disease is ludicrous…there seems to be an agenda to reduce the population under the guise of public safety”* (ITNJ, 2020.). Buttar’s statement underscores a common critique among those wary of modern vaccination programs: that health crises are leveraged to advance a more covert agenda of societal control and, potentially, population reduction.

Bill Gates, a key figure in the global health sphere, once claimed that 3 billion of people must die, especially in Africa. He has also drawn attention for his statements on vaccines and population control. In a 2010 TED Talk, Gates discussed how improvements in healthcare, including vaccinations, could help reduce population growth by promoting healthier societies with stable family planning (Gates, 2010). Critics argue that while such strategies are ostensibly benevolent, they may ultimately serve a depopulation agenda, especially given the concerns raised about the ingredients and potential side effects of the vaccines promoted by Gates' foundation.

Dr. Judy Mikovits, a virologist and whistleblower, testified before the ITNJ that vaccines could introduce contaminants into the body, which compromise immune systems and lead to chronic diseases rather than the immunity promised (ITNJ, 2020). Mikovits’ research on contaminants found in vaccines—specifically, foreign animal cells linked to cancer and immune disorders—suggests a deliberate risk to human health. She noted, *“The entire vaccine program, from shingles to measles, lacks proven lifetime immunity and contributes to chronic diseases, which have surged alongside the introduction of harmful components like aluminum and mercury”* (ITNJ, 2020). Her statement supports the argument that the recent pandemic response, with its emphasis on rapid, mass vaccination, was more about controlling and testing public health responses than promoting genuine health.

The Recent Pandemic: A Trial Run for Future Crises?

The COVID-19 pandemic has been widely regarded as unprecedented in its scale and response. However, some experts argue that it was far from spontaneous, instead serving as a pilot test for a new era of crisis management through enforced compliance, population control measures, and advanced surveillance technologies. Dr. Rashid Buttar, in testimony before the ITNJ, described COVID-19 as a *“fear-driven response”* meant to test population compliance and promote new technologies that would otherwise face resistance. He warned, *“The fear that has been spread has created an entire climate of control, moving the public closer to a world where health measures can be used to infringe upon basic freedoms”* (ITNJ, 2020).

The mechanisms used during the pandemic included mass lockdowns, travel restrictions, and eventually, vaccine mandates, all of which many believe will resurface in future crises. This approach aligns with statements made in government documents like the Rockefeller Foundation's *Scenarios for the Future of Technology and International Development*, published in 2010, which outlined potential responses to a hypothetical pandemic. The document detailed a *"Lock Step"* scenario, where a viral pandemic leads to an authoritarian approach of "tighter top-down government control" over societies. This model predicted that populations would submit to restrictions in exchange for the promise of safety, mirroring the compliance seen in the COVID-19 crisis (Rockefeller Foundation, 2010).

Environmentalism as a Veil for Population Reduction?

In recent decades, environmentalism has become another major front for population control ideologies. Radical environmentalists argue that Earth's resources are overstretched and that population control is necessary to achieve sustainability. Statements like that of Prince Philip, Duke of Edinburgh, who remarked in 1988, *"If I were reincarnated, I would wish to return as a killer virus to lower human population levels,"* highlight a troubling attitude towards human life (Winn, 2008). This view aligns with a perspective that places environmental priorities above human dignity, framing humanity as a problem rather than as caretakers of God's creation (Genesis 1:28).

Programs associated with the United Nations' Sustainable Development Goals (SDGs) indirectly promote population stabilization, particularly in developing countries. Goals related to health and gender equality encourage family planning as a path to sustainability (UN, 2015). Critics like Dr. Mikovits contend that such policies often prioritize reducing birth rates rather than genuinely improving health outcomes. As Mikovits testified, *"The vaccine program itself has contributed to a breakdown of natural immunity, leading to chronic diseases, which have surged alongside the introduction of harmful vaccine components like aluminum and mercury"* (ITNJ, 2020).

Furthermore, concerns have risen over the possibility that modern technology could influence weather patterns as a means of environmental control. Some argue that the UN's environmental agenda, while ostensibly aimed at combating climate change, also serves as a cover for policies that limit human activity and growth under the guise of protecting the planet. Dr. Rashid Buttar testified about chemtrails and other forms of atmospheric modification, stating, *"We are dealing with heavy metals, persistent organic pollutants, and other toxic agents that are not only present in the air we breathe but are also directly affecting our bodies."* He emphasized that these toxins suppress immunity and heighten susceptibility to disease (ITNJ, 2020). These concerns align with broader issues of environmental weaponization, where natural resources may be manipulated for control rather than public benefit.

Technological Advances and Their Implications for Control

The rapid advancement of technology, particularly in the fields of artificial intelligence, genetic engineering, and nanotechnology, raises significant ethical concerns regarding population management and control. These concerns are echoed by Dr. Ana Mihalcea, who claims that COVID-19 vaccines contain nanotechnology that could be used for population control and surveillance (Callender & Mihalcea, 2023). The transhumanist movement, which aims to enhance human capabilities through technology, introduces unprecedented possibilities for exerting control over human biology, aligning with Dr. Mihalcea's warnings about a broader plan to create a controlled, transhuman population.

Dr. Charles Lieber's case exemplifies these concerns. The former Harvard scientist was arrested in 2020 for concealing ties with Chinese institutions. His work on developing virus-sized nanotransistors capable of interfacing with the human body sparked fears about potential biomedical control. These tiny devices could theoretically transmit signals within the human body, raising alarming questions about privacy and autonomy (ITNJ, 2020). This aligns with Dr. Mihalcea's research, which she claims demonstrates evidence of synthetic biology and artificial intelligence in vaccinated individuals' blood samples (Callender & Mihalcea, 2023).

The integration of 5G technology further compounds these worries. While promising faster and more efficient communication, 5G infrastructure supports massive data collection, making it an ideal platform for extensive surveillance. Some medical professionals have expressed concerns about potential health impacts and even more controversial claims. Dr. Rashid Buttar, during the ITNJ hearings, suggested 5G could contribute to immune suppression and other health issues, stating, *"Studies show that high-frequency technologies, like 5G, can negatively affect the human body, and when combined with other toxic exposures, this has a compounding effect on overall health"* (ITNJ, 2020).

This concern is shared by others in the medical community. Dr. Ana Mihalcea suggests that 5G technology might be used in conjunction with vaccine-delivered nanotechnology to influence human behavior and health (Callender & Mihalcea, 2023). Similarly, Dr. Sherry Tenpenny revealed, during a 2021 Ohio House Health Committee hearing, that COVID-19 vaccines could potentially *"interface"* with 5G technology, leading to magnetization of individuals. She said, *"I'm sure you've seen the pictures all over the internet of people who have had these shots and now they're magnetized. They can put a key on their forehead. It sticks. They can put spoons and forks all over them and they can stick"* (The Columbus Dispatch, 2021). This was further elaborated by Dr. Montanari (2022) who revealed shocking revelations about covid-19 vaccine and magnets.

Dr. Buttar warned about the potential misuse of nanotechnology in medicine and public health. He suggested that integrating nanotechnology into vaccines could allow for remote manipulation of individuals, stating, *"These [nanotechnologies] can either emit or receive signals, which could be used to control or shut down certain physiological responses."* This raises profound ethical questions about such innovations in medicine and their potential for infringing on personal privacy and autonomy (ITNJ, 2020). Dr. Buttar’s warning aligns with many whistleblowers who warned that nanobots are being introduced into the human body through various means, including vaccines, masks, and COVID-19 tests; as part of a mind control agenda, reminiscent of the CIA's MK ULTRA program (Verità nascoste, 2021). These concerns are further substantiated by other researchers. Dr. Ana Mihalcea has signaled that nanotechnology in vaccines could be used for population control and surveillance, as part of a global depopulation agenda (Callender & Mihalcea, 2023). Additionally, Italian scientist Dr. Antonietta Gatti, known for her research on nanoparticles, reported finding *"self-assembling nanostructures"* in COVID-19 vaccines. Dr. Gatti conclusively warned that these structures, capable of forming complex arrangements, could potentially serve purposes beyond just vaccination (Gatti, 2021).

Some researchers have raised concerns about the involvement of elite organizations in developing technologies for population control. A video titled *"Progetti da incubo per il nostro futuro: DARPA and Illuminati, dittatura del NWO"* (Nightmare projects for our future: DARPA and Illuminati, NWO dictatorship) suggests that organizations like DARPA are working on advanced technologies that could be used to control and reduce populations. The presenter clearly demonstrates how these efforts are part of a broader plan to establish a *"New World Order"* (NWO) dictatorship using cutting-edge technologies (Progetti da incubo per il nostro futuro, 2021).

According to the same video, artificial intelligence, nanotechnology, and other emerging technologies are being developed not just for scientific advancement, but potentially for population control. These opinions align with the concerns expressed by Dr. Mihalcea and Dr. Buttar about the integration of nanotechnology in vaccines and the potential misuse of 5G technology. These theories highlight the growing unease about the rapid advancement of technology and its potential implications for human autonomy and privacy (Progetti da incubo per il nostro futuro, 2021). Mazzucco echoes many of these ideas, highlighting the connections between these technological advancements and broader agendas of population control or manipulation (Mazzucco,2021). Andrew Bridgen (2022) argues, *"The elites feel they don't need 90% of us on the planet any longer"*(Bridgen, 2024).

The ITNJ Hearings: Testimonies from Whistleblowers and Experts

The ITNJ hearings have offered a platform for researchers and professionals to voice concerns about global health practices, many of whom argue that current policies prioritize control over genuine health benefits. Dr. Mikovits and Dr. Buttar, among others, provided testimony alleging that regulatory agencies like the CDC and WHO have consistently suppressed information that would expose the potential dangers of vaccines and other health interventions. Dr. Mikovits asserted that “the forced retraction of our research under Dr. Fauci’s oversight exemplifies the manipulation within scientific institutions to serve the pharmaceutical industry’s interests” (ITNJ, 2020).
In her testimony, Dr. Mikovits also referenced the misclassification of diseases linked to contaminated blood supplies and vaccines. According to her, the hepatitis B vaccine and subsequent HIV contamination led to millions of deaths, with an estimated 30 million Americans potentially impacted by related chronic conditions. These revelations, she argued, indicate a system that disregards public health in favor of broader objectives, possibly including population reduction (ITNJ, 2020).

Water and Food Supply Manipulation

Control over basic resources, including food and water, is a critical aspect of any comprehensive agenda to manage populations. According to Dr. Mikovits, contamination and manipulation of food and water supplies are becoming increasingly evident. For example, genetically modified organisms (GMOs), pesticides like glyphosate, and harmful additives are common in food supplies, which critics argue diminish human health and fertility. Research has shown that glyphosate can disrupt gut microbiota and contribute to chronic diseases, highlighting how food supply modification may serve as a quiet but effective means of weakening population health (Samsel & Seneff, 2013).
Water control efforts are also cause for concern. In regions where water is privatized or controlled by large corporations, access is restricted, potentially leaving vulnerable populations without essential resources. During the ITNJ hearings, several experts pointed out that efforts to add chemicals, such as fluoride, to public water supplies are marketed as health interventions but may have adverse health effects. Studies have linked excessive fluoride consumption to cognitive issues and thyroid problems, raising ethical questions about enforced chemical additives under the guise of health benefits (Grandjean & Landrigan, 2014).

Biblical Prophecy and the Vision of an End-Time Agenda

For Christians, understanding potential end-time deceptions through a biblical lens is crucial. The Bible warns of a future system under the Antichrist that will exercise unprecedented control over humanity. Passages like *Revelation 13:16-17*, which describe a mark that will be required for commerce and daily life, align with modern concerns about biometric control, surveillance, and forced medical interventions. This concept of a centralized, inescapable system is echoed in testimonies like that of Dr. Buttar, who argued that COVID-19 restrictions and vaccine mandates represent "a loss of freedom unparalleled in recent history, as people are forced to comply with protocols that violate personal choice" (ITNJ, 2020).
The Bible also emphasizes the sanctity of life and commands humans to *"be fruitful and multiply"* (Genesis 9:1). Efforts to reduce or control human reproduction directly contradict this mandate. Furthermore, the Apostle Paul teaches that *"God has not given us a spirit of fear, but of power, love, and self-discipline"* (2 Timothy 1:7), challenging Christians to reject fear-driven compliance that may contradict their faith.

Conclusion:

The evidence presented in this article strongly suggests that global elites are indeed pursuing a sinister depopulation agenda. From the manipulation of vaccines and nanotechnology to the control of food and water supplies, it appears that powerful forces are working to reduce and control the world's population. The testimonies from experts like Dr. Buttar, Dr. Mikovits, and others paint a troubling picture of a world where individual freedoms are being systematically eroded in service of this agenda.
As Christians, we must remain vigilant and discerning in the face of these developments. However, we should not be overcome by fear or despair. Instead, we should view these events through the lens of biblical prophecy and recognize them as potential signs of the end times. Our primary focus should be on preparing ourselves spiritually for the imminent return of Christ.
The Bible tells us to *"be ready, for the Son of Man is coming at an hour you do not expect"* (Matthew 24:44). In light of the disturbing trends we've examined, now more than ever, we must heed this call. Let us draw closer to God, strengthen our faith, and live lives that reflect the hope and love of Christ. As we await the rapture, let us also be beacons of truth and light in a world increasingly shrouded in darkness.
While we cannot control the actions of global elites or the unfolding of prophetic events, we can control our response. Let us stand firm in our faith, share the gospel with urgency, and encourage one another as we see the Day approaching. For though the world may seem to be spiraling into chaos, we have the assurance that our redemption draws near. As Jesus promised, *"When these things begin to take place, stand up and lift up your heads, because your redemption is drawing near"* (Luke 21:28).
